

Dense-Shortlist to XML Architecture

Inspired by the late-fusion XML view in the TVR paper, but redrawn for the measured repo pipeline

Measured validation operating point for dense -> XML top-5

2179 -> 5

candidate videos per query
before XML scoring

1.48x

speedup vs full XML
7.36 -> 4.96 ms/query

0.38 -> 1.43

VCMR R@1@0.5
validation improvement

15.60 = 15.60

SVMR R@1@0.5
localization preserved
